## Easy Ways To Keep Your Immune System Strong

The immune system is a powerful component of the human body. The immune system recognizes when viruses, bacteria and other foreign invaders enter or compromise the body, and then takes action to prevent illnesses from taking over. The average person can help his or her immune system do its job more effectively by making the immune system as strong as it can be.

Harvard Medical School says that diet, exercise, age, and psychological stress may immune affect system response. Certain lifestyle choices can promote a strong immune system.

· Get adequate sleep. Doctors

believe sleep and immunity are closely tied. A study of 164 healthy adults published by the National Institutes of Health found those who slept fewer than six hours each night were more likely to catch a cold than people who slept for more than six hours. Aim for adequate rest each night to keep your body in top form.

• Increase your intake of fruits and vegetables. Fruits and vegetables supply the powerhouse antioxidants that are essential for protecting a body against free radicals. Free radicals may play a role in heart disease, cancer and other diseases. Serve fruits and/or vegetables with every meal to antioxidant-rich foods. Consume fiber and fermented foods. Fiber can help feed the gut microbiome, which is linked to a robust immune system. The microbiome also may prevent harmful pathogens from entering the body through the digestive tract. Data also suggests that eating more fermented foods can further strengthen and populate healthy bacteria in the gut. • Exercise regularly. Aim for 30

ensure you're getting enough

minutes of moderate exercise per day, advises the American Heart Association. Thirty minutes of exercise each dav can go a long way toward keeping the body healthy. The U.S.

## When Should You Replace Rotors and Brake Pads?

The ability to accelerate and steer freely is vital to vehicle performance. Equally crucial is being able to stop the car to avoid collisions and obstacles. Brake pads and rotors are vital components of braking mechanisms that need to be maintained and serviced.

Drivers may wonder how frequently they have to replace brake parts. Car and Driver magazine states brake pads are among the most crucial braking components. Brake pads create the friction that helps stop a car when they are pressed against the brake rotor. also known as the brake disc. It's in drivers' best interests to ensure that brake pads, as well as rotors, always function properly and are replaced before their effectiveness is compromised.

REPLACING BRAKE PADS Brake pads are made from different materials, but all will wear down over time, losing a portion of material every time the brakes are used. Eventually brake pads will not be able to generate enough friction to stop the vehicle auickly. Industry experts generally recommend brakes be replaced every 20,000 to 60,000 miles. Since that is a wide mileage range, drivers can listen for squealing noises or grinding sounds or feel for vibrations when deploying the brakes. Each of those signs may indicate brakes need to be replaced.

### **REPLACING ROTORS**

Like brake pads, rotors also will wear out over time. Brake rotors must meet a certain thickness to be considered safe. If they are below that thickness, then they must be fully replaced. Some drivers opt to have their rotors resurfaced. This means removing any grooves, hotspots or anomalies on the rotors that can cause uneven wear of the brake pads. However, if the rotors are too thin, they cannot be resurfaced, as this removes some additional rotor material. Rotors can only be resurfaced once before replacement. Some vehicles have rotors that cannot be resurfaced at all.

Rotors can go thousands of miles before they need to be replaced, but vibrations while braking and squeaking noises are usually indicative that rotors need to be checked and/or replaced. Even though brake pads and rotors may wear out at different intervals, many automotive professionals advise replacing rotors when brake pads are changed for optimal performance and safety.

Brakes are an essential safety component. Work with a qualified mechanic to have brake pads and rotors serviced before wear and tear adversely affects driver safety and vehicle performance.

vehicles against sun damage.

## Stock Up On Vehicle Breakdown Supplies

Unforeseen situations can crop up at any time. Anyone who has had a roadside breakdown in their car understands this. A flat tire or an engine malfunction is something no driver wants to experience, but those with a well-stocked vehicle emergency kit and breakdown strategy can get through most situations rather easily.

A 2017 survey from AAA found that 40 percent of drivers in the United States are not ready to handle a typical roadside emergency breakdown. The organization estimates it helps some seven million motorists get back on the road each summer. A well-equipped roadside emergency kit may help drivers get their vehicles back on the road on their own.

• First aid kit: The first aid kit will celebrate its 133rd birthday in 2021. The Johnson & Johnson company began commercializing first aid kits in 1888. Having a first aid kit in the car to treat minor injuries can be helpful in

the event of an accident or even after injuring oneself during a breakdown.

· Fire extinguisher: Cars are full of various mechanical parts and are susceptible to catching on fire. The National Fire Protection Association says vehicle fire extinguishers need to be rated for Class B and C fires.

• Jumper cables: A weak or dead battery is often the culprit in breakdowns. Jumper cables enable drivers to get a charge from another motorist, and may help get a person back on the road quickly. If possible, get a set of cables that also comes with safety gloves and heavy duty clamps, offers Defensive Driving Online, a defensive driving course.

 Mobile phone/charger: A mobile phone is essential for calling for assistance, but the phone is only useful if it's charged.

• Blanket: Keep a blanket in the trunk or another storage area. Should the vehicle die in cold weather, that blanket can help keep passengers warm until assistance arrives

· Basic tools: Tools like a screwdriver, ratchet set and wrench may enable drivers to complete minor repairs. Tools also should include tire-changing gear, such as a jack and lug nut remover.

 Traction aid: Non-clumping kitty litter or sand can provide the traction needed to get off of a slippery area of roadway.

 Flashlight: A flashlight can help keep you visible and able to see your surroundings in dark conditions.

 Flares: Should a breakdown occur in the dark, flares can alert other drivers.

 Snacks and water: Water and food that stores well, such as emergency rations, granola bars or trail mix, can quell hunger pangs and provide an energy boost while waiting for help.

Rope/bungee cords/tarp: These items can each be used in various situations to secure a vehicle.

## Why Is Tire Rotation So Important?

Vehicle owners need to keep maintenance on the mind to ensure their cars and trucks are operating at peak capacity. Various components should be checked and serviced at key intervals. Oil changes and fluid top-offs are part of routine maintenance, but it can be easy to forget about other important parts of the vehicle, including tires

Rotating tires is vital to their Bridgestone Tires upkeep. tire rotation advises that involves routinely repositioning a vehicle's tires in specific patterns from front to back and side to side. According to Big O Tires, the front tires tend to wear on the outside edges because the tire leans over when a driver turns a corner. The rear tires just follow the front ones, so they usually wear more evenly. By leaving tires in place, the outside edges on the front tires will wear down much faster than the rest and those tires will need to be replaced sooner. Rotation may be

required by tire warranties. Rotation also keeps the tires working properly.

Experts generally advise tire rotation every 6,000 to 8,000 miles, even if they do not show any signs of wear. It is challenging to determine if weather treads are uneven or how much wear has been sustained just by looking at them. Rotating tires can prolong the life of tires and decrease how frequently they need to be replaced.

Rotating tires keeps the tread depth uniform and helps maintain traction and consistent handling across all four tires. Bridgestone says the tire rotation pattern that is best for a particular vehicle depends on the type of tire being used. Patterns are recommended by the standardizing body of the tire industry, called The Tire and Association, Rim Inc. Individuals can consult with professional mechanics about the proper way to rotate tires. Many tire manufacturers or automotive stores that have sold customers tires also will do tire rotations — some free of charge.

In addition to proper traction, minimizing uneven tire treads causes the vehicle to be more balanced, advises Wrench, a mobile auto repair and maintenance company. This enables the driver to have more control even when roads are slippery. Many auto service centers will then align and balance tires after they have been rotated. At this time the mechanic will likely check brakes as well, since it is easy to see and reach them when the tires are off.

Tire rotation is an important component of vehicle maintenance. Check with a qualified automotive professional to see if it's time to have your vehicle's tires rotated.

## Signs Headlights Need To Be Replaced

Automobiles require a little TLC to stay on the road and operate efficiently. When vehicle maintenance is ignored, vehicles operate less efficiently and, in many instances, less safely as well.

Jerking and stalling is a telltale sign of engine trouble, but some vehicle problems are more subtle. One such problem is fading headlights. Fading headlights can pose a signifi-cant threat to drivers and their passengers as well as fellow motorists. According to the National Safety Council, drivers do only one-quarter of their driving at night. However, the NSC notes that 50 percent of traffic deaths occur at night. figures highlight the Such potential dangers of nighttime driving, which only becomes more dangerous if headlights are not operating at optimal capacity.

Since drivers do most of their driving during the daytime, it's easy to overlook headlight performance. However, it's important that drivers learn to recognize the signs that headlights need to be replaced.

DIMMING- Dimming headlights do not necessarily require replacement. In some instances dimming headlights are a byproduct of a dirty car. The buildup of dirt and grime can reduce light output even when the headlights are otherwise fine. If your car is dirty, take it to the car wash and make sure the headlights are scrubbed clean of dirt and grime. Then drive at night to see if the light output of your headlights is still dim. If so, the headlight bulbs may need to be replaced.

FLICKERING- Flickering headlights can indicate anything

Charge Up Your Car Battery Knowledge

from worn out headlight bulbs to a weak car battery to loose connections. Flickering is one of the more dangerous headlight issues, as it can lead to headlights suddenly going dark while drivers are on the road at night. If headlights are flickering, take the car to a mechanic as soon as possible to have the issue resolved.

ONE LIGHT OUT- When one headlight goes dark, chances are the other is not far behind. Automotive experts recommend replacing headlight bulbs in pairs, even if only one bulb has gone dark, because this ensures equal light output. Headlight maintenance tends to be overlooked. But recognizing the signs of fading headlights can help drivers avoid accidents and vastly improve the safety of nighttime driving.

AUTO REPAIR NETWORK

That means our customers have the ability to support a small family-owned business and still have a 14,000 plus member nationwide warranty.

~ CAR CARE SPECIAL ~				

Vehicles consist of many essen- produced by the battery, the energy conductor inside, it tial components to keep them recharging it as a result. This is often indicative of overchargtial components to keep them running efficiently and effectively. Car and truck owners should have an understanding of how their vehicles function so they can diagnose and address problems as they arise.

Car batteries are an important component of any vehicle. Even though engines are the powerhouse of any car or truck, without a battery, the engine wouldn't be able to work. According to Firestone Complete Auto Care, car batteries work by providing a jolt of electricity necessary to power all the electrical components of the vehicle. This is achieved through a chemical reaction that changes chemical energy into the electrical energy needed to deliver voltage to the starter. In addition to initially starting the car, the battery also keeps electric current steady to keep the engine running. The battery also works in con-junction with the alternator to power the electronics in the car, according to the automotive information blog Autosessive. While the car is running, the alternator reverses the current Page 10-SCC

happens during long journeys, so people who drive for short bursts of time may find that their batteries will not have a chance to recharge and may not have the longevity desired.

There is quite literally a lot riding on a functioning battery. No one wants to be caught stranded by a dead battery, so drivers may wonder if there are any indicators that may signal the battery needs replacement.

• SLOW TURNOVER: If a vehicle does not immediately start or if the cranking is sluggish and takes longer to start, it may mean the battery is starting to fail.

• FREQUENT, SHORT TRIPS: Drivers who make frequent, short trips may find their car batteries do not have time to fully recharge. This, coupled with overtaxing thanks to a lot of accessory use, may cause the battery and the alternator to have shortened life spans.

 LOW BATTERY FLUID LEV-ELS: If the fluid level is below ing and excessive heat.

CORROSION: Corrosion buildup, dust, dirt, and grime on battery connections may cause performance problems. Inspecting and cleaning the terminals can prolong the battery life.

ODORS AND LEAKS: Battery leaks can produce a sulfur odor similar to the smell of a rotten egg. This can become problematic over time, and leaks may indicate an aging or damaged battery.

 AGÉ: Most batteries have a finite life span. A well-maintained battery can last up to five vears. Neglect can reduce that life expectancy considerably.

 BLOATED OR CRACKED BATTERY CASE: Replace the battery immediately if the case is cracking, as it could be because excessive heat is swelling the battery.

Understanding how car batteries work can help drivers keep their cars running smoothly.
